

Transportation Report – April 2011

Sidewalk Repair on Bridge Street

The City will be filling in the missing piece of concrete sidewalk on the south side of Bridge Street between River Road and the Bridge over the Rideau River. The sidewalk will be 1.8 m wide which is the City's minimum width standard. We will know more about proposed lane reductions during the sidewalk construction once the Traffic Management Plans are available

The pictures below show where the missing piece will be constructed this summer.
